Online máster, in progress

FOCUS

Applied AI

	 01. THE LETTER
	Hello team,
	I'm Ikrame. Before I focused on development I worked in operations and administration. I sat close to teams, to clients, and to processes that had to keep moving, and that's where I picked up the habit of noticing what's missing, what gets repeated, and what tangles when nobody has had time to tidy it.
	I started coding because I wanted to build those tools myself. It took a while. I made projects, broke them, put them back together, until writing code became how I solve things.
	These days I work mostly on backends. I pause before I write, to understand who will use the system and which part of the decision should stay with a person. I reach for AI when it helps, and then the code validates the data and leaves a trail someone can review.
	I'm fairly meticulous. I prefer work that is documented and covered by tests. This year I'm starting the vocational master's (máster de FP) in AI and big data, fully online, and I'm preparing GCP and AWS cloud certifications at the same time.
	When I build software I think about the person who will use it, and about the context around that decision.
	Best,
	<i>Ikrame Ibn Hayoun</i>

PROJECT

ReckonFlow

FastAPI, PostgreSQL, and Redis. Decimal ledger. Idempotency and row locks (FOR UPDATE) protect the ledger on retries. pytest in CI.

JUDGMENT

How I work

Closed schemas (extra=forbid) limit the model's output. Deterministic validation controls the writes. Business rules stay in code.

NOW

What I'm learning

Online vocational master's (máster de FP) in AI and big data, and GCP and AWS certifications in preparation. import-resolve-cli and english-spanish-web-localization are installable tools published on PyPI and skills.sh.
