STUDY

Online máster, in progress

FOCUS

Applied AI

SAY HI ON LINKEDIN

	 01. THE LETTER
	Hello team,
	I'm Ikrame. Before I focused on development I worked in operations and administration. That work kept me in direct contact with teams, clients, and day-to-day processes. That's where I learned to notice what's missing, what gets repeated, and what piles up when nobody has had time to sort it.
	I started coding because I wanted to build those tools myself. It took a while. I made projects, broke them, put them back together, until writing code became how I solve things.
	These days I work mostly on backends. Before I start coding I want to know who will use the system, and which part of the decision should stay with a person. I use AI when it helps, and then the code validates the data and leaves a trail someone can review.
	I'm fairly meticulous. I prefer work that is documented and covered by tests. This year I'm starting the vocational master's (máster de FP) in AI and big data, fully online, and I'm preparing GCP and AWS cloud certifications at the same time.
	When I build software I keep the person who will use it in mind.
	Best,
	<i>Ikrame Ibn Hayoun</i>

PROJECT	JUDGMENT	NOW
ReckonFlow	How I work	What I'm learning
FastAPI, PostgreSQL, and Redis. Decimal ledger. Idempotency and row locks (FOR UPDATE) protect the ledger on retries. pytest in CI.	Closed schemas (extra=forbid) limit the model's output. Deterministic validation controls the writes. Business rules stay in code.	Online vocational master's (máster de FP) in AI and big data. Official GCP and AWS certifications in preparation. Right now I'm going deeper into data, AI, and cloud.
